

# Nephrostogram

Radiology

The prevention of infection is a major priority in all healthcare and everyone has a part to play.

- Please decontaminate your hands frequently for 20 seconds using soap and water or alcohol gel if available
- If you have symptoms of diarrhoea and/or vomiting, cough or other respiratory symptoms, a temperature or any loss of taste or smell please do not visit the hospital or any other care facility and seek advice from 111
- Keep the environment clean and tidy
- Let's work together to keep infections out of our hospitals and care homes.

# Introduction

This leaflet explains:

- What a nephrostogram is
- How the examination is undertaken
- What risks are involved.

## What is a nephrostogram?

You will already have had a nephrostomy catheter (small tube) inserted in your back into your kidney to drain your urine. A nephrostogram checks whether your kidney drains adequately into your ureter (the tube from the kidney down to the bladder) and bladder.

## Is there any preparation?

There is no special preparation for this examination. You may eat and drink normally. You can take your medication normally.

## Do I need to bring anything / anyone with me?

Please bring a dressing gown and slippers if you have them. Do not bring unnecessary amounts of money or valuables.

It would be helpful to bring a relative or friend to the department with you.

## What happens during a nephrostogram?

You will be asked to change into a gown. A contrast dye (a colourless dye that shows up on X-rays) will be injected down the tube into your kidney. The radiologist will follow the progress of the dye and take a number of images.

## How long will it take?

The examination is usually completed within 30 minutes.

## What if I am Diabetic?

If you are diabetic, please contact the Radiology department as soon as you receive your appointment, so that further instructions can be given to you.

## Are you pregnant?

To ensure that you are not pregnant you should have this examination between the 1<sup>st</sup> and 10<sup>th</sup> day of your menstrual period. If you have not started your period in the 10 days before this appointment or you are actively trying for a family please contact the Radiology department, it may be necessary to re-arrange your appointment.

**Please contact the Radiology department as soon as you receive this appointment if you think you may be pregnant.**

## **Are there any risks or side effects from radiation?**

There are some risks involved with the use of X-rays.

The overriding concern of your doctor and radiology is to ensure that when radiation is used the benefits from making the right diagnosis outweigh any small risk involved.

Radiologists / radiographers who perform the examination are trained to ensure that the radiation dose associated with the examination is always kept to a minimum.

## **After the examination**

The contrast dye will be passed out in the urine over the following hours.

## **When will I get the results?**

The X-rays need to be studied and a report issued, so we will not be able to give you your results straight away. The radiographer will advise you where and when to get your results.

## **Student training**

A student radiographer may be present during the examination. If you would prefer them not to be present, please let the radiographer know at the time.

## **Special needs**

If you have any special needs, which are likely to affect your examination, please contact the Radiology department.

# Car Parking

Please leave plenty of time to find a parking space as parking is limited. The nearest car park to the Radiology department is P6 situated on the south side of the hospital (charges are applicable).

# How to contact us

If you have any questions or would like to discuss anything about your examination, before you attend, please contact the Radiology department on 01902 694062 available between 09:00 and 16:00, Monday to Friday.
