

Level 1 Thickened Liquids (Slightly thick)

Acute and Community AHP Group

Patient name: Date:

The prevention of infection is a major priority in all healthcare and everyone has a part to play.

- **Please decontaminate your hands frequently for 20 seconds using soap and water or alcohol gel if available**
- **If you have symptoms of diarrhoea and/ or vomiting, cough or other respiratory symptoms, a temperature or any loss of taste or smell please do not visit the hospital or any other care facility and seek advice from 111**
- **Keep the environment clean and tidy**
- **Let's work together to keep infections out of our hospitals and care homes.**

Introduction

You have been assessed by a Speech and Language Therapist (SLT). They have found that you have dysphagia. **Dysphagia** is a difficulty swallowing food, drink or medication.

Your SLT has recommended that you have Level 1 thickened liquids to manage your dysphagia.

This booklet is designed to give you information about having Level 1 thickened liquids. Please contact your SLT if you have any questions after reading this information

Why do I need Level 1 thickened liquids?

If your mouth or throat muscles are weak or uncoordinated, it can be difficult to swallow. This can cause any thin liquid you swallow, for example, a drink, to go down the "wrong way" and into the airway. This is called **aspiration**.

Aspiration can happen with or without any signs. A sign that aspiration may have happened is coughing when drinking. Aspiration that does not show any obvious signs is called **silent aspiration**.

Aspiration can cause chest infections. This can lead to pneumonia.

Having Level 1 thickened liquids reduces the risk of aspiration. This is because thicker liquids move more slowly. This gives you increased control of the liquid and longer for your swallow to happen.

To make Level 1 thickened liquid you will need to use a thickening powder (for example 'Resource ThickenUp Clear'). This will be prescribed by a doctor, following recommendation by an SLT.

What is Level 1 thickened liquid?

- Slightly thick liquids
- Require a little more effort to drink than a thin drink
- Can be drunk through a straw (please check with your SLT whether it is safe for you to use a straw, as it can make swallowing more difficult)

To make Level 1 thickened liquid using Resource ThickenUp Clear you need:

**1 level scoop of thickener
for 200ml of thin liquid**

All liquids, for example, sauces, soups, milk in cereal, should be thickened to level 1 consistency

For savoury foods you can add cornflour, instant potato granules etcetera, to thicken sauces instead of thickening powder.

You should not eat foods such as ice-cream and sorbet if you are recommended to have thickened liquids, as these melt to a thinner consistency in your mouth

What is Resource ThickenUp Clear?

Resource ThickenUp Clear is a xanthan gum based instant food and drink thickener. It is a Food for Special Medical Purposes for the management of patients with swallowing difficulties and must be used under medical supervision. It is neutral in flavour and should not affect the taste of your liquids.

How to prepare Level 1 thickened liquids

1 level scoop of
Resource ThickenUp Clear

Place in a clean dry cup

Add 200ml of liquid

Stir well

Leave to stand for 1 minute

Check for correct thickness

If **too thin** wait
Some drinks may take up to 5 minutes
to thicken

Top tips

- Cold drinks can be thickened in large amounts and stored in a tightly covered jug until needed.
- Thickened drinks must be thrown away after 6 hours at room temperature and after 24 hours if left in the fridge.
- Measure the liquids carefully. The amount of thickener needed will be different for different sized cups.
- If you do not like plain thickened water, try adding cordial before thickening.
- For fizzy drinks, stir the drink before thickening to reduce the amount of fizz produced.

To thicken larger amounts of liquid, use the correct number of scoops for the amount of liquid.

Increase the number of scoops of Resource ThickenUp Clear if you have increased the amount of liquid.

Level 1 thickened liquid	
Volume of liquid	Number of scoops
200 mls	1 scoop
600 mls	3 scoops
1000 mls	5 scoops

Be Aware: Dry thickening powder can be dangerous if ingested or inhaled. Please keep out of the reach of people who may be at risk of eating the powder (for example those with cognitive or visual problems).
