

Epistaxis (Nose Bleeds)

Emergency Department

Causes of a nosebleed

It is not always possible to give a reason for a nosebleed. Most nosebleeds are caused when a fragile blood vessel touching the inside surface of a nostril is ruptured

- Nose picking
- Rubbing the nose
- Blowing the nose
- Colds
- Hay fever
- Minor injuries to the nose.

The prevention of infection is a major priority in all healthcare and everyone has a part to play.

- Please decontaminate your hands frequently for 20 seconds using soap and water or alcohol gel if available
- If you have symptoms of diarrhoea and/or vomiting, cough or other respiratory symptoms, a temperature or any loss of taste or smell please do not visit the hospital or any other care facility and seek advice from 111
- Keep the environment clean and tidy
- Let's work together to keep infections out of our hospitals and care homes.

What do I do if my nose bleeds?

Advise the person to:

- Sit up and tilt forward with mouth open
- Avoid lying down unless feeling faint
- If possible apply an ice pack to forehead or bridge of nose, which can help assist in stopping the bleeding
- Pinch the soft part of the nose firmly and hold for 10-15 minutes without releasing pressure, breathing through the mouth.

If the bleeding does not stop within 30 minutes you should seek medical advice (NHS 111) or consider attending the A&E.
